## FEATURES

Linear function modulation:	provides precise gas flow		
Negative coefficient thermistor:	detects temperature change in 1/2 of a degree		
Variable speed inducer motor:	monitors and controls combustion fan		
Quiet operation:	reduces noise through use of swept blades in convection fan; and through the design of the combustion chamber and heat exchanger which silently expand or contract due to temperature changes		
Self diagnostic electronics:	continually monitors functions; provides auto shutdown codes; indicates when air filter needs cleaning
